WORK EXPERIENCE

FRONT END DEVELOPER

(September) 2022

Letsignit (Full Remote)

Maintain and develop features on the product allowing users to create and then assign email signatures to their employees.

- Improve loading performance and network query optimization by working closely with infrastructure and backend teams
- Work on a legacy AngularJS/Vue2 and migrate the project to Astro + Vue3
- Add features on the internal design system using Stencil
- Design and implement gherkins tests in code

FRONT END DEVELOPER

(January - June) 2022

Klanik (Full Remote) | National health insurance fund

Develop an app in a microservice environment built to help employers to provide administrative documents.

- Use internal design system and adapt it to the needs
- Override Vuetify theme to provide a custom experience

FULL STACK DEVELOPER

2020 - 2021

Quarks solutions (Besançon, 25)

- Led the development of a new Android application for chemical risk management
- Built a documented internal library of reusable components for Nuxt.js
- Produced a user login system using JSON web tokens
- Delivered and maintained a PWA facilitating preparation of truck tours for a company of trading

FULL STACK DEVELOPER INTERNSHIP

(March - May) 2020

Quarks solutions (Besançon, 25)

Implemented a safety data sheet extractor with NodeJs.

- Designed a user interface in Vue.js to present extraction results and choose the files to process
- Conceived work queues using RabbitMQ to handle multiple file processing (~ 10 000)
- Optimized the extraction algorithm according to the results obtained
- Saved results in a MongoDB database

DEVELOPER INTERSHIP

(March - June) 2018

General Electric (Belfort, 90)

Development of display and facilitation software access to the assembly data of a gas turbine in Python.
